

Workshop: AgentOps

Evaluate, Ship, Observe, and Operate Microsoft Foundry agents

Workshop

Duration: 6h hands-on; 4h demo
Structure: Select one mode before delivery
Difficulty: 300: Advanced
Format: Remote or onsite

Description

Apply Evaluate, Ship, Observe, and Operate to Microsoft Foundry agents through one preselected mode: participant hands-on labs or instructor-led demonstrations. Intended for teams that govern, build, release, and operate AI agents.

Outcomes

- Explain the four AgentOps practices and how they connect.
- Recognize evaluation evidence and release readiness controls.
- Interpret runtime signals and operational responses.
- Relate the practices to guided Microsoft Foundry scenarios.

Prerequisites

- **Hands-on:** [lab access](#), Foundry project, model quota, and the selected Ship CI/CD track.
- **Demo:** a validated instructor environment; no participant Azure access.

Pre-workshop provisioning

For hands-on delivery, assign every Participant access entry to each participant before the session. Setup and troubleshooting are outside workshop time.

Environment readiness

Area	Ready when
Foundry project	One assigned project per participant
Model capacity	Quota and unique name assigned; participant creates the deployment in the lab
Observability	Application Insights connected; test trace confirmed
Tooling	AgentOps Accelerator installation completed

Access assignments

Identity	Scope	Role or access
Participant	Lab delivery	Lab repository access ; selected Ship CI/CD track
	Foundry project	Foundry User
	Foundry resource	Reader
	Model deployment	Cognitive Services Contributor on the Foundry account
	Application Insights	Log Analytics Reader
	Evaluator model	Cognitive Services OpenAI User on its AI Services resource
Project managed identity	Foundry resource	Foundry User

See [Foundry RBAC](#), [deployment permissions](#), and [tracing setup](#).

Methodology

- **Learn:** presentations, demos, and discussion.
- **Apply:** guided labs or instructor walkthroughs in Microsoft Foundry.
- **Reinforce:** review results and connect the four practices.

Scope

- **Evaluate:** define criteria and interpret evaluation evidence.
- **Ship:** establish versioning, release gates, and readiness.
- **Observe:** interpret runtime traces, metrics, logs, and usage.
- **Operate:** respond, maintain, manage change, and improve.

Observe and Operate are distinct practices delivered together in one content module because their workflows and evidence are closely connected.

Agenda

Module	Duration	Learning artifact
Evaluate	2h hands-on 1h 20m demo	Sample evaluation criteria
Ship	2h hands-on 1h 20m demo	Sample release checklist
Observe and Operate	2h hands-on 1h 20m demo	Sample runtime signal review

Delivery options

- **Hands-on (preferred):** participants execute the lab. Allow one hour for presentation and one hour for the lab.
- **Demo (fallback):** the instructor executes the lab. Allow one hour for presentation and 20 minutes for the demo.
- **Advanced extension (optional):** two hours hands-on or one hour demo at difficulty 400, producing a tested runbook, regression case, and updated gate.

Choose the mode before delivery. Do not provision environments during the workshop.

Preparation and delivery

1. Confirm participants, selected modules, and outcomes.
2. Rehearse demonstrations and labs before the session.
3. Capture questions, takeaways, and follow-up learning resources.

Reference implementation

Labs use [AgentOps Accelerator](#) as a practical reference implementation alongside native Microsoft Foundry capabilities.
