

Workshop: AgentOps

Evaluate, Ship, Observe, and Operate Microsoft Foundry agents

Workshop

Duration: 6 hours with prerequisites met
Structure: 3 modules, 2 hours each
Difficulty: 300: Advanced
Format: Remote or onsite

Description

AgentOps is the discipline of evaluating, releasing, observing, and operating AI agents through repeatable practices. This workshop applies those practices to Microsoft Foundry agents across the agent lifecycle.

Objectives

- Understand the four AgentOps practices: Evaluate, Ship, Observe, and Operate.
- Identify lifecycle evidence and controls.
- Apply the practices through Microsoft Foundry demonstrations and labs.

Outcomes

- Shared AgentOps terminology and lifecycle understanding.
- Evaluation criteria and release readiness controls.
- Observability and operations priorities.
- Documented gaps, decisions, and next actions.

Audience

Teams responsible for governing, building, releasing, and operating AI agents.

Prerequisites

- An Azure subscription with sufficient model quota in a supported region.
- Permissions to create Microsoft Foundry resources and projects and deploy the required models.

Pre-workshop provisioning

Module timing assumes a ready environment. Provisioning and troubleshooting are outside workshop time.

- Create and test the Foundry project, model deployment, and lab agent.
- Grant participants access and validate evaluation and tracing permissions.
- Validate lab data, tools, connections, telemetry, and agent responses.

See [Foundry environment setup](#) and [agent tracing](#).

Methodology

- **Learn:** presentations, demos, and discussion.
- **Apply:** guided labs using Microsoft Foundry.
- **Act:** documented outputs for the implementation guidance.

Scope

- **Evaluate:** define criteria and interpret evaluation evidence.
- **Ship:** establish versioning, release gates, and readiness.
- **Observe:** interpret runtime traces, metrics, logs, and usage.
- **Operate:** respond, maintain, manage change, and improve.

Observe and Operate are distinct practices delivered together in one content module because their workflows and evidence are closely connected.

Agenda

Module	Duration	Practical output
Evaluate	2 hours	Evaluation requirements
Ship	2 hours	Release controls
Observe and Operate	2 hours	Operational priorities

Delivery options

Deliver all three modules in one day or schedule them separately across multiple days. Preserve one hour for presentation and one hour for the lab per module.

Preparation and delivery

1. Confirm participants, selected modules, and outcomes.
2. Rehearse demonstrations and labs before the session.
3. Capture decisions, gaps, owners, and next actions.

Reference implementation

[AgentOps Accelerator](#) is an open-source jumpstart used alongside native Microsoft Foundry capabilities.
